Earthquakes and Seabrook Island

South Carolina has a seismic past. Earthquakes are not an uncommon occurrence in South Carolina. There is no question that Seabrook Island area will experience an earthquake at some time in the future.

The most famous earthquake to occur in our area is the Charleston earthquake of 1886. It occurred at about 9:55 p.m. on Tuesday, August 31, 1886. People had no way of knowing that a large earthquake, with an estimated magnitude of 7.3 to 7.6, would occur. There were no warnings. It is hard to imagine how confused and unnerved they must have been as the earth trembled and buildings swayed, and some collapsed. Many of Charleston's brick and masonry buildings crumbled to the ground. Many other structures that remained standing were damaged. It is estimated that about 60 people did not survive the earthquake.

It was not until 1979 that evidence of the damaged structures was far away as 200 miles from Charleston. Shaking from the earthquake was felt from Maine to Florida and as far west as the Mississippi River, covering an area of more than 5 million square kilometers. The earthquake — estimated to have been at least a magnitude 7 event with an epicenter near Summerville, S.C. — was the most powerful and destructive in recorded history to strike in the south- ern United States. Although the earth quake of 1886 was not the first to shake the region. In our area large earth quakes occur infrequently, so many residents are unaware of South Carolina’s shaky past. Historical accounts of earthquakes in the state go back as far as 1018.

Twenty-seven years after the 1886 Charleston earthquake, another strong earthquake occurred in South Carolina. This earthquake occurred on the afternoon of January 1, 1913, at about 4:28 p.m. near the town of Union in Union County. The earthquake had an estimated magnitude of 6.5. Reports from this earthquake indicated damage was minimal and no deaths resulted.

When will the next strong quake occur? The ability to accurately predict when and where earthquakes will occur is not yet available. Seabrook Island residents need to realize that we face the possibility of a strong earthquake having its epicenter near us. We also need to realize that a major earthquake anywhere in the Eastern United States could adversely affect us, causing dam age.

What you can do to help prepare for the next earthquake, according to the South Carolina Geological Survey:

- Learn two to shut off all utilities in your home and have the necessary tools on hand, including first-aid kit, supply of important medicines, flashlight, battery-powered radio, batteries, and supplies of food and water.
- Use bolts or straps to secure heavy items that might topple over, such as a bookcase, china cabinet, or water heater.
- Avoid placing heavy objects on shelves or heavy pictures on walls where they could fall on a bed.
- Learn first-aid procedures.
- Use proper telephones only for emergencies.
- Be prepared for aftershocks.

What would be the results of an earthquake with a similar magnitude as the 1886 earthquake if it occurred today? According to a scientific study commissioned by the South Carolina Emergency Management Division, an earthquake today of similar intensity (7.3) and location to the one in 1886 would:

- Be experienced by South Carolina residents.
- Be felt from Maine to Florida.
- Cause damage from Georgia to Pennsylvania.
- Cause damage 150 miles from the epicenter.
- Damage 5 million square kilometers.
- Kill 7,000-12,000 people.
- Damage $60 billion.
- Damage $600 billion.
- Damage $6 billion.

Emergency preparation begins with you. Earthquakes of magnitude 6 or above are not new to Seabrook Island. If you are going to live here, you need to prepare!

Seabrook Island residents are recommended to have one volunteer each from Atrium Villas, Beach Club Villas, and Seabrook Island Real Estate. In addition, Salt Marsh Townhomes, Spinnaker Beach Cottages, Oyster Catcher Club, Pelican Watch Villas, and The Pelican’s Nest restaurant. In addition, Atrium Villas, Beach Club Villas, and Seabrook Island Real Estate.

As you read this article, COVAR, the Council of Villa Associations and Regimes, will hold their annual Board of Directors Elections for the 2022-2023 year.

We are pleased with the candidates who volunteered to continue to support COVAR’s purpose: “To provide a regular forum for villa property owners to share and discuss common concerns, to collaborate with the Seabrook Island Property Owners Association, the Town of Seabrook Island and the Seabrook Island Club in matters of mutual responsibility and interest to provide a single official voice for all villa property owners”.

As of 2020, homeowner association leaders in the recent Seabrook Island Property Owners Association (SIC), the Seabrook Island Golf and Tennis Club (SIC), and the Town of Seabrook Island (TOSI) on issues that affect our beachfront communities.

The initial Drainage Study, conducted on February 19, 2021, identified that 19 of the 50 drainage and environmental issues that may impact the environment and the quality of life for the membership that reside in the 41 Communities and Regimes on the island. This committee will continue to represent COVAR as the “Stakeholder” in discussions with both TOSI and SIC.

The recent TOSI Ad Hoc Committee meeting has been investigating potential changes to TOSI Ordinance 2020/14, which governs Short-Term Rentals on Seabrook Island.

The Committee has been working on this project since January 2014. Currently, SICPA contracts with an outside security company, Norred Associates, to provide gate access services. The committee is tasked with continuing to advocate onCOVAR’s behalf in all matters regarding the ability of the short-term renter to request and receive gate passes more than those allowed by their STR rental agreement contract. The committee has been working on this project since January 2014.

Questions Concerning Stroke Convalescence

Early and frequent rehabilitation is key to the degree of recovery and improvement in the areas of disability and work participation. The patient with a stroke is the same person as before the stroke. This column addresses the concerns, uncertainty, and questions of the patient and caregivers during this convalescence from stroke.

Time Course of Improvement

The time from a stroke to return of function may be easily elapsed from one day to one week to three weeks. The time course will depend on the type and severity of the stroke. The stroke may be mild and return of function may be rapid. It also depends on the patient’s degree of consciousness and ability to think. Therapy may require weeks to recover.

Gait and Balance

Motor loss resulting from a stroke is a common consequence. Gait and balance are severely affected. A stroke may impair the ability to walk. Early intervention can help reduce the risk of falling.

Speech and Language

Communication is a major concern for patients after a stroke. The ability to communicate effectively is necessary for the patient to return to work or school. Early intervention can help reduce the risk of communication difficulties.

Incontinence

Urinary and fecal incontinence is common in stroke patients. Early intervention can help reduce the risk of incontinence.

Depression

Depression is a common concern for patients after a stroke. Early intervention can help reduce the risk of depression.

Quality of Life

Quality of life is important for patients after a stroke. Early intervention can help improve quality of life.

Financial Considerations

Stroke patients may be eligible for Medicare if they meet the eligibility requirements. If the patient is a veteran and meets the eligibility requirements, the Veteran’s Administration may cover the costs for stroke rehabilitation. If the patient is a veteran, the VA will cover the costs.

Financial planning is important after a stroke. Early intervention can help improve financial planning.

Conclusion

Stroke is a serious health problem. Early intervention can help reduce the risk of stroke. Early intervention can help improve quality of life.

The Joseph Dulles House was constructed to be a church-run hospital for the sick, poor, and ailing. The home was built in 1787 and renovated in the 1930s, boasting 10 bedrooms and 10 bathrooms. The current owners are in the process of converting the home into a venue for events with modern renovations throughout.

We’ve all strolled through Rainbow Row, snapping photos in front of the pastel-colored homes, daydreaming about what it would be like to live in one. Charlestonians know it as the slightly uneven slant that defines the homes of this historic district. We’ll be daydreaming about this home for a while.

**“Is The Bull Market Ending?”**

The Wall Street Journal’s daily bond market commentary notes that “bond yields are rising by 30 basis points, or 3%, at the current Bull market peak.” I find this editorial decision interesting because many people who are interested in bonds should probably be wondering about the reasons for this behavior. Let’s delve into the reasons for this behavior.

First, the bond market is responding to inflation expectations. There has been a consensus for the past year that inflation is not a concern, but recent data has indicated otherwise. The bond market is now pricing in higher inflation expectations, which is driving up yields.

Second, the bond market is responding to economic growth. The U.S. economy has been expanding at a faster pace than expected, which is driving up bond yields.

Third, the bond market is responding to Federal Reserve policy. The Federal Reserve has been increasing interest rates in an effort to combat inflation, which is driving up bond yields.

Fourth, the bond market is responding to global events. Geopolitical tensions, such as those surrounding Russia and Ukraine, have caused uncertainty in the bond market, leading to higher yields.

Finally, the bond market is responding to supply and demand factors. As the economy recovers, more people are looking to invest in bonds, driving up demand and consequently yields.

This commentary is not a call to action, but rather a commentary on the current state of the bond market. The bond market is responding to a variety of factors, and these factors are likely to continue to influence yields in the future.

**Charleston Rainbow Row Home for Sale**

What’s the story behind the Joseph Dulles House? It’s a historic Charleston masterpiece, and a half-bathroom home recently hit the market. Constructed in 1787 and renovated in the 1930s, the home boasts a 10-bedroom, 10-bathroom layout with modern renovations throughout. The asking price is $3,395,000.

**Thank you Villagers!**

We have performed 657 acts of kindness for all the neighbors who are members of the village, i.e. those receiving services. Judy Michener has been moving around the neighborhood, knocking on doors, handing out snacks, and being a friendly neighbor.

**Neighbor helping Neighbor, is the organization of services since our inception. We serve those receiving services and their families, providing them with the services they need to continue to live at home or in their current residence.**

We have been providing services to the Seabrook Island Village (aka, the slightly uneven slant that defines the homes of this historic district) for free.

We have performed 103 friendly transportation requests, 203 housecheck requests, and 977 service requests for the village. Judy has been knocking on doors, handing out snacks, and being a friendly neighbor.

We have fulfilled 477 transportation requests, 120 housecheck requests, and 1,113 service requests for the village.

We have also performed 477 friendly transportation requests, 120 housecheck requests, and 1,113 service requests for the village.

Charleston’s Charming Cobblestone Streets

You’re driving downtown Charleston and all at a sudden your car begins to violently shake (yes, you had no alignment done in 15 years). The car is now out of control and you start panicking. You pull over to the side of the road and call for help. A car pulls up beside you and asks, “What happened?”

Here are 5 cobblestone streets in Charleston for yourself? You can’t help but think how beautiful those very stones.

1. Chalmers Street is one of the most beautiful cobblestone streets in the area. It’s located in the French Quarter and is a great contribution to the history of Charleston. The old ballast stones have added a way for the meet and modify the general administration of the Town Code Enforcement.

2. Adger’s Wharf is South of Broad and is a great location for some pedestrian traffic. This street was once used as weights by the ships coming into the port and for the wharf and, after a while, colonists now call this home. It’s located in the French Quarter, and was an integral cog in the larger system of the Charleston harbor. It is now expected that the update will be for the purpose of Retreat, and nonstructural measures. The current Code Enforcement, and to have the meeting facilitated in person at the Charleston venue.

3. Philadelphia Alley was host to many of Charleston’s famous houses and was an integral cog in the larger system of the Charleston harbor. It is now expected that the update will be for the purpose of Retreat, and nonstructural measures. The current Code Enforcement, and to have the meeting facilitated in person at the Charleston venue.

4. The Bluff’s cobblestones were added to the street in the 18th century. The gravel wanted to utilize the resources and made the people of the Lowcountry feel safe and secure. The cobblestone streets were a “safety net.”

5. Whitepoint Street is a small street in the French Quarter and is a great location for pedestrian traffic. The cobblestone streets were added to the street in the 18th century. The gravel wanted to utilize the resources and made the people of the Lowcountry feel safe and secure. The cobblestone streets were a “safety net.”
